Subject: Water conservation facilities in the Institution.

Reference: 7.1.4 Water conservation facilities available in the Institution

Dear Sir/Madam,

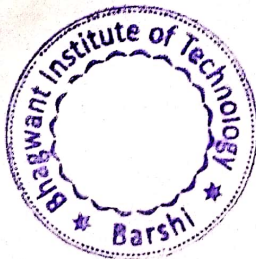

In institute premises, to achieve rainwater harvesting (RWH) the pipes are laid down from the roof of all the buildings to collect, convey and recharge by disposing of in dry bore wells. Due to the recharge of groundwater table the rise in groundwater table and increase in the specific yield of bore well has been observed. It has been observed that bore wells get more time to dry than the previous years. The groundwater taken out from wells and bore wells are then utilized for various purposes such as drinking, gardening, etc. in the campus.

The detailed documents are available at following link:
